# ENGINEERING TEST REPORT

**Communication Receiver** Model Nos.: IC-R1500 & IC-PCR1500

FCC ID: AFJ288000

Applicant:

## **ICOM Incorporated**

1-1-32, Kamiminami, Hirano-ku Osaka, Japan, 547-0003

Tested in Accordance With

Federal Communications Commission (FCC) 47 CFR, Part 15, Subpart B Scanning Receivers Operating in the Frequency Band 0.010 to 3299.9999 MHz (excluding cellular bands)

UltraTech's File No.: ICOM-122FCC15B

This Test report is Issued under the Authority of Tri M. Luu, Professional Engineer, Vice President of Engineering UltraTech Group of Labs

Date: January 10, 2006

Report Prepared by: Dharmajit Solanki

Tested by: Wayne Wu, EMI/RFI Technician

Issued Date: January 10, 2006

Test Dates: Dec.21 - Jan.06, 2006

- The results in this Test Report apply only to the sample(s) tested, and the sample tested is randomly selected.
- This report must not be used by the client to claim product endorsement by NVLAP or any agency of the US Government.

## **EXHIBIT 2. INTRODUCTION**

## 2.1. SCOPE

| Reference:                    | FCC Part 15, Subpart B, Sections 15.107, 15.109, 15.111 & 15.121   |
|-------------------------------|--|
| Title:                        | Code of Federal Regulations (CFR), Title 47, Telecommunication, Part 15  |
| Purpose of Test:              | To gain FCC Certification Authorization for Scanning Receivers Operating in 0.010 to 3299.9999 MHz (excluding cellular bands) Band.  |
| Test Procedures:              | Both conducted and radiated emissions measurements were conducted in accordance with American National Standards Institute ANSI C63.4 - American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz. |
| Environmental Classification: | Commercial, industrial or business environment.  |

## 2.2. RELATED SUBMITTAL(S)/GRANT(S)

None.

## 3.2. EQUIPMENT UNDER TEST (EUT) INFORMATION

The following information (with the exception of the Date of Receipt) has been supplied by the applicant.

| Brand Name:           | ICOM Incorporated  |
|-----------------------|--|
| Product Name:         | Communication Receiver   |
| Model Name or Number: | IC-R1500   |
| Serial Number:        | 0000008  |
| Type of Equipment:    | Scanning Receiver  |
| Accessories:          | Icom AC/DC Power Supply, Model DFU105180, IN: 120VAC 60Hz, 29W, OUT: 10.5 VDC, 1.8A. |
| Power input source:   | 10.5 VDC Adapter   |

File #: ICOM-122FCC15B

FCC ID: AFJ288000

#### 3.3. **EUT'S TECHNICAL SPECIFICATIONS**

| RECEIVER                    |   |
|-----------------------------|---|
| Equipment Type:             | Fixed or Mobile                                   |
| Power Supply Requirement:   | 10.5 VDC Adapter                                  |
| Operating Frequency Range:  | 0.010 to 3299.9999 MHz (excluding cellular bands) |
| RF Input Impedance: 50 Ohms |   |

#### **LIST OF EUT'S PORTS** 3.4.

| Port<br>Number | EUT's Port Description | Number of Identical Ports | Connector Type    | Cable Type<br>(Shielded/Non-<br>shielded) |
|----------------|------------------------|---------------------------|-------------------|---|
| 1              | Antenna Connector      | 1                         | BNC Female        | N/A                                       |
| 2              | External Speaker Jack  | 1                         | SP jack           | Non-Shielded                              |
| 3              | DC IN                  | 1                         | Single Pin male   | Non-Shielded                              |
| 4              | Packet                 | 1                         | Single Pin Female | Non-Shielded                              |
| 5              | Controller             | 1                         | RJ11              | Non-Shielded                              |
| 6              | USB                    | 1                         | USB               | Non-Shielded                              |

#### **ANCILLARY EQUIPMENT** 3.5.

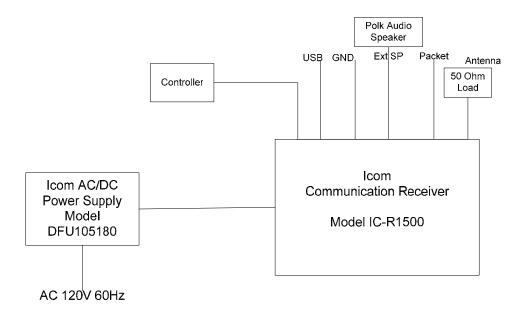

The EUT was tested while connected to the following representative configuration of ancillary equipment necessary to exercise the ports during tests:

| Ancillary Equipment # 1 |                    |  |
|-------------------------|--------------------|--|
| Description:            | AC/DC Power Supply |  |
| Brand name:             | ICOM               |  |
| Model Name or Number:   | DFU105180          |  |
| Serial Number:          | N/A                |  |
| Cable Type:             | Non-Shielded       |  |

| Ancillary Equipment # 2  |                       |  |
|--------------------------|-----------------------|--|
| Description:             | Audio Speaker (8 Ohm) |  |
| Brand name:              | Polk                  |  |
| Cable Type: Non-Shielded |                       |  |

File #: ICOM-122FCC15B

## 3.6. DRAWING OF TEST SETUP

# EXHIBIT 4. EUT OPERATING CONDITIONS AND CONFIGURATIONS DURING TESTS

## 4.1. CLIMATE TEST CONDITIONS

The climate conditions of the test environment are as follows:

| Temperature:        | 21°C     |
|---------------------|----------|
| Humidity:           | 51%      |
| Pressure:           | 102 kPa  |
| Power input source: | 10.5 VDC |

## 4.2. OPERATIONAL TEST CONDITIONS & ARRANGEMENT FOR TEST SIGNALS

| Operating Modes:       | The receiver was operated in the normal intended mode during testing   |
|------------------------|--|
| Special Test Software: | None   |
| Special Hardware Used: | None   |
| Receiver Test Antenna: | The EUT's was tested with its antenna attached for radiated emissions. |

| Receiver Test Signals   |   |
|---|---|
| Frequency Band(s):  | 0.010 to 3299.9999 MHz (excluding cellular bands) |
| Test Frequency(ies): (Near lowest, near middle & near highest frequencies in the frequency range of operation.) | 30, 445 and 960 MHz                               |

#### EXHIBIT 5. **SUMMARY OF TEST RESULTS**

#### **LOCATION OF TESTS** 5.1.

All of the measurements described in this report were performed at Ultratech Group of Labs located in the city of Oakville, Province of Ontario, Canada.

- AC Powerline Conducted Emissions were performed in UltraTech's shielded room, 16'(L) by 12'(W) by 12'(H).
- Radiated Emissions were performed at the Ultratech's 3-10 TDK Semi-Anechoic Chamber situated in the Town of Oakville, province of Ontario. This test site been calibrated in accordance with ANSI C63.4, and found to be in compliance with the requirements of Sec. 2.948 of the FCC Rules. The descriptions and site measurement data of the Oakville 3-10 TDK Semi-Anechoic Chamber has been filed with FCC office (FCC File No.: 31040/SIT 1300B3) and Industry Canada office (Industry Canada File No.: IC2049-1). Last Date of Site Calibration: June. 20, 2005.

#### **APPLICABILITY & SUMMARY OF EMC EMISSION TEST RESULTS** 5.2.

| FCC Part 15,<br>Subpart B | Test Requirements  | Compliance<br>(Yes/No) |
|---------------------------|--|------------------------|
| 15.107(a),<br>Class B     | AC Power Line Conducted Emissions Measurements                           | Yes                    |
| 15.111(a)                 | Receiver Antenna Power Conducted Emissions for Non-Integral Antenna Port | Yes                    |
| 15.109(a)                 | Radiated Emissions from Scanning Receivers & Class B Digital Device      | Yes                    |
| 15.121                    | Requirements for Scanning Receivers                                      | Yes                    |

#### 5.3. MODIFICATIONS REQUIRED FOR COMPLIANCE

None.

3000 Bristol Circle, Oakville, Ontario, Canada L6H 6G4 Tel.: 905-829-1570, Fax.: 905-829-8050

Page 7

# EXHIBIT 6. MEASUREMENTS, EXAMINATIONS & TEST DATA FOR EMC EMISSIONS

## 6.1. TEST PROCEDURES

Please refer to Ultratech Test Procedures, File# ULTR-P001-2004 and for Test Procedures.

## 6.2. MEASUREMENT UNCERTAINTIES

The measurement uncertainties stated were calculated in accordance with requirements of UKAS Document LAB 34 with a confidence level of 95%. Please refer to Exhibit 6 for Measurement Uncertainties.

## 6.3. MEASUREMENT EQUIPMENT USED

The measurement equipment used complied with the requirements of the Standards referenced in the Methods & Procedures ANSI C63.4 and CIPSR 16-1-1.

**ULTRATECH GROUP OF LABS** 

3000 Bristol Circle, Oakville, Ontario, Canada L6H 6G4 Tel.: 905-829-1570, Fax.: 905-829-8050

File #: ICOM-122FCC15B January 10, 2006

Page 8

## 6.4. AC POWER LINE CONDUCTED EMISSIONS [§ 15.107(a)]

## 6.4.1. Limits

The equipment shall meet the limits of the following table:

| Frequency of emissions (MHz)  | Class B Conducted Limit (dBμV) |           | Measuring Bandwidth    |
|-------------------------------|--------------------------------|-----------|------------------------|
| Frequency of emissions (Winz) | Quasi-Peak                     | Average   | Measuring Bandwidth    |
| 0.15 to 0.5                   | 66 to 56*                      | 56 to 46* | RBW = 9 kHz            |
| 0.5 to 5                      | 56                             | 46        | VBW ≥ 9 kHz for QP     |
| 5 to 30                       | 60                             | 50        | VBW = 1 Hz for Average |

<sup>\*</sup> Decreasing linearly with logarithm of frequency

## 6.4.2. Method of Measurements

Refer to Ultratech Test Procedures ULTR-P001-200 & ANSI C63.4 for method of measurements.

## 6.4.3. Test Equipment List

| Test Instruments   | Manufacturer    | Model No. | Serial No. | Frequency Range                      |
|--|-----------------|-----------|------------|--------------------------------------|

### 6.5. RECEIVER ANTENNA POWER SPURIOUS/HARMONIC CONDUCTED EMISSIONS [§15.111(a)]

Page 12

FCC ID: AFJ288000

January 10, 2006

## 6.5.1. Limits

Receivers that operate (tune) in the frequency range 30 to 960 Mhz and CB receivers that provides terminals for the connection of an external antenna may be tested to demonstrate compliance with the provisions of @ 15.109 with the antenna terminals shielded and terminated with a resistive termination equal to the impedance specified for the antenna, provided these receivers also comply with the following:- With the receiver antenna terminal connected to a resistive termination equal to the impedance specified or employed for the antenna, the power at the antenna terminal at frequency within the range from 30 Mhz to 5<sup>th</sup> harmonic of the highest frequency shall not exceed 2.0 nanowatts (or -57 dBm @ 50 Ohm).

### 6.5.2. Method of Measurements

Refer to Ultratech Test Procedures ULTR-P001-200 & ANSI C63.4 for method of measurements.

The spectrum shall be investigated from the lowest radio frequency signal generated or used in the device. without going below the lowest frequency for which a radiated emission limit is specified, up to the frequency shown in the following table:

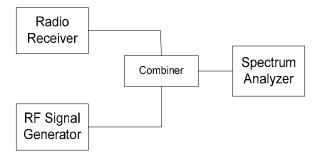

| Highest frequency generated or used in<br>the device or on which the device<br>operates or tunes (MHz) | Upper frequency of measurement range (MHz)                                      |
|--|---|
| Below 1.705  | 30  |
| 1.705 - 108  | 1000  |
| 108 – 500  | 2000  |
| 500 -1000  | 5000  |
| Above 1000   | 5 <sup>th</sup> harmonic of the highest frequency or 40 GHz, whichever is lower |

### 6.5.3. Test Equipment List

## 6.5.4. Test Arrangement

### 6.5.5. Test Data

Conforms. Please refer to Plot # 3 through # 7 for detailed measurement data.

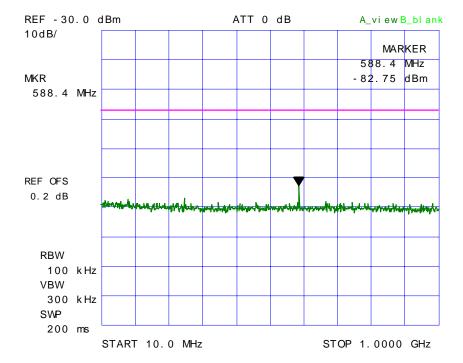

**Remark**: The FCC compliance requirements are exempted for receiver operating below 30 MHz and above

960 MHz. Therefore, tests will be performed at the receiver channel frequency of 30 MHz, 445.00

MHz and 960 MHz.

### 6.5.5.1. Plot # 3 - Receiver Conducted Emissions @ 30 MHz

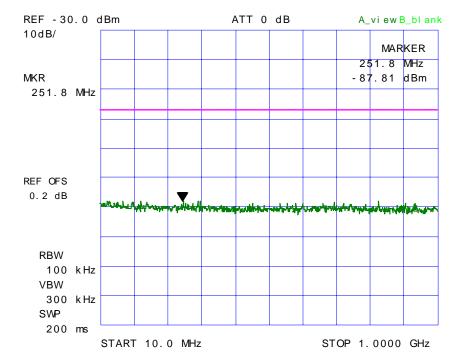

The emissions were scanned from 30 MHz to 1.0 GHz and all emissions found were more than 20 dB below the limits.

File #: ICOM-122FCC15B

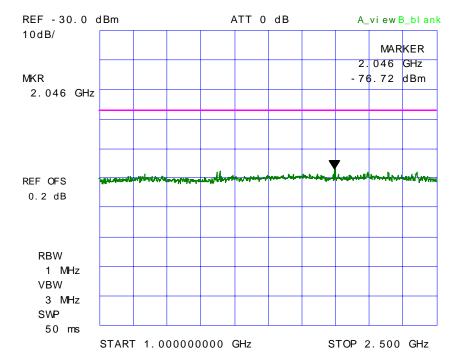

#### Plot #4 - Receiver Conducted Emissions @ 445.00 MHz 6.5.5.2.

The emissions were scanned from 30 MHz to 2.5 GHz and all emissions found were more than 20 dB below the limits.

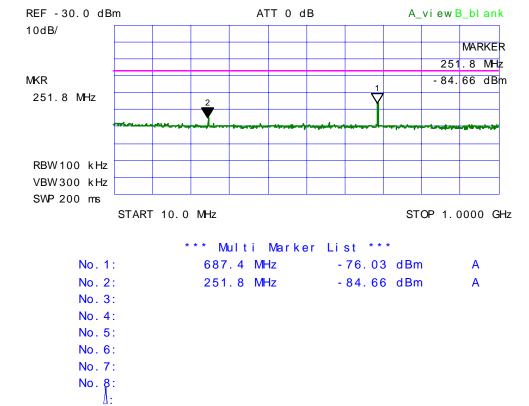

## 6.5.5.3. Plot # 5 - Receiver Conducted Emissions @ 445 MHz

The emissions were scanned from 30 MHz to 2.5 GHz and all emissions found were more than 20 dB below the limits.

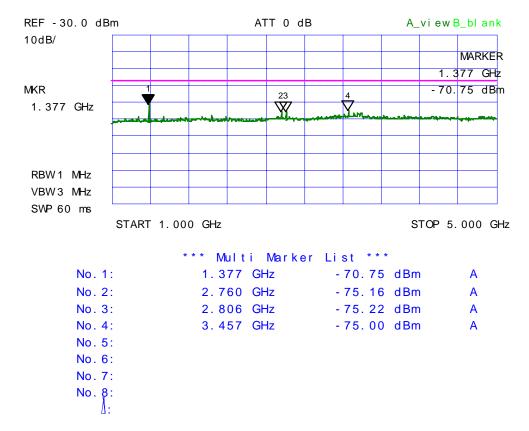

## 6.5.5.4. Plot # 6 - Receiver Conducted Emissions @ 960 MHz

The emissions were scanned from 30 MHz to 5 GHz and all emissions within 20 dB below the limits were recorded.

## 6.5.5.5. Plot # 7 - Receiver Conducted Emissions @ 960 MHz

The emissions were scanned from 30 MHz to 5 GHz and all emissions within 20 dB below the limits were recorded.

#### RECEIVER SPURIOUS/HARMONIC RADIATED EMISSIONS [§ 15.109(a)] 6.6.

## 6.6.1. Limits

The equipment shall meet the limits of the following table:

| Test Frequency Range (MHz) | Class B Limits @ 3 m<br>(dBμV/m) | EMI Detector<br>Used | Measuring Bandwidth<br>(kHz)           |
|----------------------------|----------------------------------|----------------------|--|
| 30 – 88                    | 40.0                             | Quasi-Peak           | RBW = 120 kHz, VBW <u>≥</u> 120 kHz    |
| 88 – 216                   | 43.5                             | Quasi-Peak           | RBW = 120 kHz, VBW <u>&gt;</u> 120 kHz |
| 216 – 960                  | 46.0                             | Quasi-Peak           | RBW = 120 kHz, VBW <u>&gt;</u> 120 kHz |
| Above 960                  | 54.0                             | Average              | RBW = 1 MHz, VBW ≥ 1 Hz                |

## 6.6.2. Method of Measurements

Refer to Ultratech Test Procedures ULTR-P001-200 & ANSI C63.4 for method of measurements.

The spectrum shall be investigated from the lowest radio frequency signal generated or used in the device, without going below the lowest frequency for which a radiated emission limit is specified, up to the frequency shown in the following table:

| Highest frequency generated or used in the device or on which the device operates or tunes (MHz) | Upper frequency of measurement range (MHz)                                      |
|--|---|
| Below 1.705  | 30  |
| 1.705 - 108  | 1000  |
| 108 – 500  | 2000  |
| 500 -1000  | 5000  |
| Above 1000   | 5 <sup>th</sup> harmonic of the highest frequency or 40 GHz, whichever is lower |

## 6.6.3. Test Equipment List

| Test Instruments                   | Manufacturer       | Model No.     | Serial No.  | Frequency Range   |
|------------------------------------|--------------------|---------------|---|-------------------|
| Spectrum Analyzer/<br>EMI Receiver | Rohde &<br>Schawrz | FSEK20/B4/B21 | 0/B4/B21 834157/005 9 kHz – 40 GHz<br>with external mixer |                   |
| Microwave Amplifier                | Hewlett Packard    | HP 83017A     |   | 1 GHz to 26.5 GHz |

## Page 21 FCC ID: AFJ288000

### 6.6.5. Test Data

### Remark:

The FCC compliance requirements are exempted for receiver operating below 30 MHz and above 960 MHz. Therefore, tests will be performed at the receiver channel frequency of 30 MHz, 445 MHz and 960 MHz.

## 6.6.5.1. Near Lowest Frequency (30 MHz)

The emissions were scanned from 30 MHz to 1 GHz and all emissions found were more than 20 dB below the limits.

## 6.6.5.2. Near Middle Frequency (445 MHz)

The emissions were scanned from 30 MHz to 2.5 GHz and all emissions found were more than 20 dB below the limits.

## 6.6.5.3. Near Highest Frequency (960 MHz)

The emissions were scanned from 30 MHz to 5 GHz and all emissions found were more than 20 dB below the limits.

File #: ICOM-122FCC15B

### RADIATED EMISSIONS FROM CLASS B UNINTENTIONAL RADIATORS (DIGITAL 6.7. **DEVICES)** [§ 15.109(a)]

## 6.7.1. Limits

The equipment shall meet the limits of the following table:

| Test Frequency<br>Range (MHz) | Class B Limits<br>@3m<br>(dBμV/m) | EMI Detector<br>Used | Measuring Bandwidth (kHz)              |
|-------------------------------|-----------------------------------|----------------------|--|
| 30 – 88                       | 40.0                              | Quasi-Peak           | RBW = 120 kHz, VBW <u>&gt;</u> 120 kHz |
| 88 – 216                      | 43.5                              | Quasi-Peak           | RBW = 120 kHz, VBW <u>&gt;</u> 120 kHz |
| 216 – 960                     | 46.0                              | Quasi-Peak           | RBW = 120 kHz, VBW <u>&gt;</u> 120 kHz |
| Above 960                     | 54.0                              | Average              | RBW = 1 MHz, VBW ≥ 1 Hz                |

### 6.7.2. Method of Measurements

Refer to Ultratech Test Procedures ULTR-P001-200 & ANSI C63.4 for method of measurements.

The spectrum shall be investigated from the lowest radio frequency signal generated or used in the device, without going below the lowest frequency for which a radiated emission limit is specified, up to the frequency shown in the following table:

| Highest frequency generated or used in the device or on which the device operates or tunes (MHz) | Upper frequency of measurement range (MHz)                                      |

The emissions were scanned from 30 MHz to 1000 MHz at 3 Meters distance and all emissions within 20 dB below the limits were recorded.

## Radiated Emissions Measurments @ 3m OFTS ICOM Communication Receiver, IC-R1500

## 6.8. REQUIREMENTS FOR SCANNING RECEIVERS [47 CFR 15.121]

## 6.8.1. FCC Rules

- a. Except as provided in paragraph (c) of this section, scanning receivers and frequency converters designed or marketed for use with scanning receivers, shall:
- (1) Be incapable of operating (tuning), or readily being altered by the user to operate, within the frequency bands allocated to the Cellular Radiotelephone Service in part 22 of this chapter (cellular telephone bands). Scanning receivers capable of ``readily being altered by the user" include, but are not limited to, those for which the ability to receive transmissions in the cellular telephone bands can be added by clipping the leads of, or installing, a simple component such as a diode, resistor or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer. Scanning receivers, and frequency converters designed for use with scanning receivers, also shall be incapable of converting digital cellular communication transmissions to analog voice audio.
- (2) Be designed so that the tuning, control and filtering circuitry is inaccessible. The design must be such that any attempts to modify the equipment to receive transmissions from the Cellular Radiotelephone Service likely will render the receiver inoperable.
- b. Except as provided in paragraph (c) of this section, scanning receivers shall reject any signals from the Cellular Radiotelephone Service frequency bands that are 38 dB or lower based upon a 12 dB SINAD measurement, which is considered the threshold where a signal can be clearly discerned from any interference that may be present.
- c. Scanning receivers and frequency converters designed or marketed for use with scanning receivers, are not subject to the requirements of paragraphs (a) and (b) of this section provided that they are manufactured exclusively for, and marketed exclusively to, entities described in 18 U.S.C. 2512(2), or are marketed exclusively as test equipment pursuant to Sec. 15.3(dd)
- d. Modification of a scanning receiver to receive transmissions from Cellular Radiotelephone Service frequency bands will be considered to constitute manufacture of such equipment. This includes any individual, individuals, entity or organization that modifies one or more scanners. Any modification to a scanning receiver to receive transmissions from the Cellular Radiotelephone Service frequency bands voids the certification of the scanning receiver, regardless of the date of manufacture of the original unit. In addition, the provisions of Sec. 15.23 shall not be interpreted as permitting modification of a scanning receiver to receiver Cellular Radiotelephone Service transmissions.
- e. Scanning receivers and frequency converters designed for use with scanning receivers shall not be assembled from kits or marketed in kit form unless they comply with the requirements in paragraph (a) through (c) of this section.

**ULTRATECH GROUP OF LABS** 

3000 Bristol Circle, Oakville, Ontario, Canada L6H 6G4 Tel.: 905-829-1570, Fax.: 905-829-8050

File #: ICOM-122FCC15B January 10, 2006

Page 25

- Page 26 FCC ID: AFJ288000
- f. Scanning receivers shall have a label permanently affixed to the product, and this label shall be readily visible to the purchaser at the time of purchase. The label shall read as follows: WARNING: MODIFICATION OF THIS DEVICE TO RECEIVE CELLULAR RADIOTELEPHONE SERVICE SIGNALS IS PROHIBITED UNDER FCC RULES AND FEDERAL LAW.
- (3) "Permanently affixed" means that the label is etched, engraved, stamped, silkscreened, indelible printed or otherwise permanently marked on a permanently attached part of the equipment or on a nameplate of metal, plastic or other material fastened to the equipment by welding, riveting, or permanent adhesive. The label shall be designed to last the expected lifetime of the equipment in the environment in which the equipment may be operated and must not be readily detachable. The label shall not be a stick-on, paper label.
- (4) When the device is so small that it is not practicable to place the warning label on it, the information required by this paragraph shall be placed in a prominent location in the instruction manual or pamphlet supplied to the user and shall also be placed on the container in which the device is marketed. However, the FCC identifier must be displayed on the device.

## 6.8.2. Declaration for Compliance with FCC §15.121

Comply with FCC 121(a)(1) – This Scanning Receiver is incapable of operating (tuning), or readily being
altered by the user to operate, within the frequency bands allocated to the Cellular Radiotelephone Service
in part 22 of this chapter (cellular telephone bands).

Please refer to manufacturer's declaration for compliance with this Rule.

Comply with FCC 121(a)(2) – This Scanning Receiver is designed so that the tuning, control and filtering
circuitry is inaccessible. The design is such that any attempts to modify the equipment to receive
transmissions from the Cellular Radiotelephone Service likely will render the receiver inoperable.

Please refer to manufacturer's declaration for compliance with this Rule.

- Comply with FCC 121(b) Please refer to the following Section of this Test Report for Scanning Receivers Cellular Band Rejection test.
- Comply with FCC 121(c) Not applicable.
- Comply with FCC 121(d) The Users Manual of this Scanning Receiver is provided with the Warning statement as below:

<u>Warning</u>: Changes or modifications not expressly approved by ICOM Incorporated could void the user's authority to operate the equipment.

- Comply with FCC 121(e) This Scanning Receiver will not be assembled from kits or marketed in kit form.
- Comply with FCC 121(f) This Scanning Receiver has a label permanently affixed to the product and this
  label is readily visible to the purchaser at the time of purchase. The label reads as follows: WARNING:
  MODIFICATION OF THIS DEVICE TO RECEIVE CELLULAR RADIOTELEPHONE SERVICE SIGNALS IS
  PROHIBITED UNDER FCC RULES AND FEDERAL LAW.

**ULTRATECH GROUP OF LABS**

Page 27

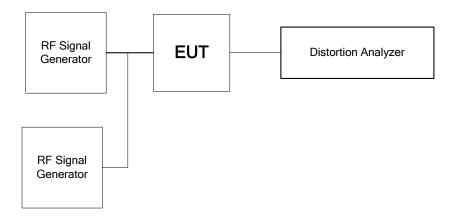

#### 6.9. SCANNING RECEIVERS CELLULAR BAND REJECTION [47 CFR 15.121(b)]

### 6.9.1. Limits

Except as provided in paragraph (c) of this section, scanning receivers shall reject any signals from the Cellular Radiotelephone Service frequency bands that are 38 dB or lower based upon a 12 dB SINAD measurement, which is considered the threshold where a signal can be clearly discerned from any interference that may be present.

### 6.9.2. Method of Measurements

- Connected the EUT as shown in the following block diagram (1)
- (2)Apply a standard RF signal to the receiver input port
- (3)Adjust the audio output signal of the receiver to it's rated value with the distortion less than 10%
- Adjust the RF Signal Generator Output Power to produce 12 dB SINAD without the audio output power (4)dropping by more than 3 dB
- (5)Repeat step (4) at lowest, middle and highest channel frequencies across all cellular base station band to establish a reference sensitivity level. The reference sensitivity taken was the lowest or worse-case sensitivity for all of the bands.
- (6)Adjust the RF Signal Generator output to a level of +60 dB above the reference sensitivity obtained in step (5)
- Set the Receiver squelch threshold (the signal required to open the squelch) no greater than +20 dB (7)above the reference sensitivity level.
- (8)Put the receiver in a scanning mode and allow it to scan across it's complete receive range
- (9)If the receiver unsquelched or stopped on any frequency, the display frequency is recorded. The signal generator output level was then adjusted until 12 dB SINAD from the receiver was produced. The signal generator level associated with this response was also noted.
- (10)Repeat this procedure for 3 frequencies in the cellular base station transmit band.
- (11)The difference between the signal generator output for any response recorded and reference sensitivity is the rejection ratio

| RF Signal Generator | Fluke           | 6061A     | 4770301        | 10 kHz – 1050 MHz |
| RF Signal Generator | Fluke           | 6061A     | 5130586        | 10 kHz – 1050 MHz |

## 6.9.4. Test Data

#### 6.9.4.1. **EUT's Operating Mode: FM**

| EUT's Scanning<br>Frequency Band<br>(MHz) | Cellular<br>Transmitter Test<br>Frequencies<br>(MHz) | RF Input Signal<br>Level @ Cellular<br>Frequencies for<br>12 dB SINAD<br>(dBm) | Reference<br>Sensitivity<br>dBm | Rejection<br>Ratio<br>(dB) | Maximum<br>Rejection Ratio<br>Limit (dB) |
|---|--|--|---------------------------------|----------------------------|--|
| 28.00 – 3000                              | 824.04, 836.40,<br>848.97, 869.04,<br>880.62, 893.97 | -40.0  | -90 to -124                     | <-50                       | -38.0                                    |

There is no spurious response detected within the above frequency band with the Rejection Ratio of at least -50 dB.

#### **EUT's Operating Mode: AM** 6.9.4.2.

| EUT's Scanning<br>Frequency Band<br>(MHz) | Cellular<br>Transmitter Test<br>Frequencies<br>(MHz) | RF Input Signal<br>Level @ Cellular<br>Frequencies for<br>12 dB SINAD<br>(dBm) | Highest<br>Reference<br>Sensitivity<br>dBm | Rejection<br>Ratio<br>(dB) | Maximum<br>Rejection Ratio<br>Limit (dB) |
|---|--|--|--|----------------------------|--|
| 0.495 – 1299.99                           | 824.04, 836.40,<br>848.97, 869.04,<br>880.62, 893.97 | -30.0  | -89 to -110                                | <-59                       | -38.0                                    |

There is no spurious response detected within the above frequency band with the Rejection Ratio of at least -59 dB.

## 6.9.4.3. EUT's Operating Mode: WFM

| EUT's Scanning<br>Frequency Band<br>(MHz) | Cellular<br>Transmitter Test<br>Frequencies<br>(MHz) | RF Input Signal<br>Level @ Cellular<br>Frequencies for<br>12 dB SINAD<br>(dBm) | Highest<br>Reference<br>Sensitivity<br>dBm | Rejection<br>Ratio<br>(dB) | Maximum<br>Rejection Ratio<br>Limit (dB) |
|---|--|--|--|----------------------------|--|
| 50.00 – 3000                              | 824.04, 836.40,<br>848.97, 869.04,<br>880.62, 893.97 | -40.0  | -89 to -114                                | <-49                       | -38.0                                    |

There is no spurious response detected within the above frequency band with the Rejection Ratio of at least -49 dB.

## 6.9.4.4. EUT's Operating Mode: SSB

| EUT's Scanning<br>Frequency Band<br>(MHz) | Cellular<br>Transmitter Test<br>Frequencies<br>(MHz) | RF Input Signal<br>Level @ Cellular<br>Frequencies for<br>12 dB SINAD<br>(dBm) | Highest<br>Reference<br>Sensitivity<br>dBm | Rejection<br>Ratio<br>(dB) | Maximum<br>Rejection Ratio<br>Limit (dB) |
|---|--|--|--|----------------------------|--|
| 0.495 – 1299.999                          | 824.04, 836.40,<br>848.97, 869.04,<br>880.62, 893.97 | -30.0  | -98 to -106                                | <-68                       | -38.0                                    |

There is no spurious response detected within the above frequency band with the Rejection Ratio of at least -68 dB.

## **EXHIBIT 7. MEASUREMENT UNCERTAINTY**

The measurement uncertainties stated were calculated in accordance with the requirements of NIST Technical Note 1297 and LAB 34

## 7.1. LINE CONDUCTED EMISSION MEASUREMENT UNCERTAINTY

| CONTRIBUTION  | PROBABILITY    | UNCERTAINTY (dB) |               |
|---|----------------|------------------|---------------|
| (Line Conducted)  | DISTRIBUTION   | 9-150 kHz        | 0.15-30 MHz   |
| EMI Receiver specification  | Rectangular    | <u>+</u> 1.5     | <u>+</u> 1.5  |
| LISN coupling specification   | Rectangular    | <u>+</u> 1.5     | <u>+</u> 1.5  |
| Cable and Input Transient Limiter calibration   | Normal (k=2)   | <u>+</u> 0.3     | <u>+</u> 0.5  |
| Mismatch: Receiver VRC $\Gamma_1$ = 0.03<br>LISN VRC $\Gamma_R$ = 0.8(9 kHz) 0.2 (30 MHz)<br>Uncertainty limits 20Log(1± $\Gamma_1\Gamma_R$ ) | U-Shaped       | <u>+</u> 0.2     | <u>+</u> 0.3  |
| System repeatability  | Std. deviation | <u>+</u> 0.2     | <u>+</u> 0.05 |
| Repeatability of EUT  |                |                  |               |
| Combined standard uncertainty   | Normal         | <u>+</u> 1.25    | <u>+</u> 1.30 |
| Expanded uncertainty U  | Normal (k=2)   | <u>+</u> 2.50    | <u>+</u> 2.60 |

Sample Calculation for Measurement Accuracy in 150 kHz to 30 MHz Band:

$$u_c(y) = \sqrt{\sum_{i=1}^{m} u_i^2(y)} = \ \ \underline{+} \ \sqrt{\ (1.5^2 + 1.5^2)/3 + \ (0.5/2)^2 + \ (0.05/2)^2 + 0.35^2} \ = \ \underline{+} \ 1.30 \ dB$$

$$U = 2u_c(y) = + 2.6 dB$$

| CONTRIBUTION  | PROBABILITY    | UNCERTAI      | NTY ( <u>+</u> dB) |
|---|----------------|---------------|--------------------|
| (Radiated Emissions)  | DISTRIBUTION   | 3 m           | 10 m               |
| Antenna Factor Calibration  | Normal (k=2)   | <u>+</u> 1.0  | <u>+</u> 1.0       |
| Cable Loss Calibration  | Normal (k=2)   | <u>+</u> 0.3  | <u>+</u> 0.5       |
| EMI Receiver specification  | Rectangular    | <u>+</u> 1.5  | <u>+</u> 1.5       |
| Antenna Directivity   | Rectangular    | +0.5          | +0.5               |
| Antenna factor variation with height  | Rectangular    | <u>+</u> 2.0  | <u>+</u> 0.5       |
| Antenna phase center variation  | Rectangular    | 0.0           | <u>+</u> 0.2       |
| Antenna factor frequency interpolation  | Rectangular    | <u>+</u> 0.25 | <u>+</u> 0.25      |
| Measurement distance variation  | Rectangular    | <u>+</u> 0.6  | <u>+</u> 0.4       |
| Site imperfections  | Rectangular    | <u>+</u> 2.0  | <u>+</u> 2.0       |
| Mismatch: Receiver VRC $\Gamma_1$ = 0.2<br>Antenna VRC $\Gamma_R$ = 0.67(Bi) 0.3 (Lp)<br>Uncertainty limits 20Log(1± $\Gamma_1\Gamma_R$ ) | U-Shaped       | +1.1<br>-1.25 | <u>+</u> 0.5       |
| System repeatability  | Std. Deviation | <u>+</u> 0.5  | <u>+</u> 0.5       |
| Repeatability of EUT  |                | -             | -                  |
| Combined standard uncertainty   | Normal         | +2.19 / -2.21 | +1.74 / -1.72      |
| Expanded uncertainty U  | Normal (k=2)   | +4.38 / -4.42 | +3.48 / -3.44      |

Calculation for maximum uncertainty when 3m biconical antenna including a factor of k = 2 is used:

$$U = 2u_c(y) = 2x(+2.19) = +4.38 \text{ dB}$$
 And  $U = 2u_c(y) = 2x(-2.21) = -4.42 \text{ Db}$
